(54) Title: INSECT MONITOR

(57) ~~Abstract~~— An insect monitor has a base (11) and a lid (12) hinged at one edge to the base. The lid can be displaced between an open position and a closed position. An insect attracting sheet (not shown) is received within the base (11). The lid (12) has at least one lifting member (18) which can engage the insect attracting sheet while the lid (12) is moved between its open and closed positions such that the distance between the sheet and the base (11) is greater when the lid is in the open position than when it is in the closed position.
